

iMedia[®] Interactive[™] XDS 4K

ULTRA HIGH DEFINITION 4K DIGITAL SIGNAGE DISPLAY GENERATOR Model: DGIMI4KB1, DGIMI4KA2, DGIMI2KA3

iMedia Interactive is a series of modules that converts any TV, display or screen into a Digital Signage Display. Both Full HD and 4K UHD options are available.

With pre-set configurations you can create instant information displays for motorway service stations, waiting rooms, lounges, hospitality receptions and other public areas. You can watch live TV streams surrounded by dynamic weather information plus news and sport tickers from 1000's of sources. For menu or promotional displays you can play photo slideshows in full screen or loop video files continuously. It includes a YouTube video player that provides seamless looping and can also be synchronized with other displays for the most compelling & dynamic menu panels across multiple screens. You can also display web pages in full screen, thus allowing HTML changes to be made off-site. A dedicated management console allows the modules performance to be monitored over the internet, where changes can be made to the presentation sources and alerts can be triggered.

Because the system runs on the latest Google Android operating system, you can also choose to run your own apps, as well as access the play store and other Google services.
